

ABSTRACT OF THE DISCLOSURE

There is information such as an image data capture date and time, an image data size or the like which can not be known until image data is actually recorded in a WWW host. Since this information can not be embedded in a previously prepared HTML file, it is necessary to embed this information as a part of the image data to be displayed. In order to solve such a problem, it is disclosed an image upload system which comprises: a capture unit for capturing the image data from an image input apparatus disposed on a network; a storage unit for storing the plural image data captured by the capture unit; an image capture control unit for controlling the capture unit according to a previously designated schedule; a creation unit for creating a display image by adding information at image capture time to the image data captured by the capture unit, and a transmission unit for transmitting the display image created by the creation unit.
